Tuan Giao begins $10.1 million high-tech pig farming project in Vietnam

26 November 2026 | News

Developed in cooperation with C.P. Vietnam, the 31.2-hectare facility is expected to supply up to 60,000 market pigs annually.

Tuan Giao High-Tech Livestock and Agriculture Joint Stock Company commenced construction of its VND265 billion (US$10.1 million) Pa Kin pig farming facility on 17 November 2026 in Dien Bien province, northwestern Vietnam. Developed in cooperation with C.P. Vietnam Corporation, the project will cover 31.2 hectares and accommodate 24,000 pigs per production cycle, with projected annual output of 48,000 to 60,000 market pigs.

The facility will incorporate automated enclosed housing, temperature control, waste treatment and disease prevention systems to support commercial pig production and biosecurity. The project received investment approval from the Dien Bien Provincial People's Committee on 7 September 2026, with commercial operations planned for the first quarter of 2028.

According to provincial authorities, Dien Bien has more than 326,000 pigs, while local production meets only approximately 40 per cent of provincial consumption demand. The investment aims to strengthen domestic livestock supplies, modernise pig farming operations and reduce the province's dependence on external pork supplies.
