

Dalan Animal Health's pioneering Honeybee Vaccine recognized for Innovative Tech and Animal Health

29 November 2023 | News

Dalan Animal Health, Inc. ("Dalan"), the biotech company specializing in insect health, today announced that it has been included in the 2023 Fast Company Next Big Thing in Tech list in recognition of its innovative animal health solution, a the world's first vaccine to protect honeybees against American Foulbrood (AFB), a devastating disease that weakens and kills honeybee colonies globally, compromising our global food supply. This honor marks the third award in a series of top industry recognitions bestowed to Dalan this quarter.

Dalan Animal Health, Inc. ("Dalan"), the biotech company specializing in insect health, today announced that it has been included in the 2023 Fast Company Next Big Thing in Tech list in recognition of its innovative animal health solution, a the world's first vaccine to protect honeybees against American Foulbrood (AFB), a devastating disease that weakens and kills honeybee colonies globally, compromising our global food supply. This honor marks the third award in a series of top industry recognitions bestowed to Dalan this quarter.

In addition to Fast Company, Dalan has also been awarded the animal health innovator recognition by International Zenda Awards, which celebrates and financially awards innovative biotechnology solutions, as well as recent inclusion on TIME's Best Inventions of 2023 in the sustainability category for the promise the vaccine holds for both protecting honeybees and advancing greater biodiversity.

"Pollinators are the building blocks of our food supply and play a crucial role in maintaining ecosystem biodiversity. Without them, the global food supply as we know it ceases to exist," said Dr. Annette Kleiser, co-founder and CEO of Dalan Animal Health. "Our honeybee vaccine represents an important milestone in the collective fight for increased invertebrate health and environmental sustainability as we enable beekeepers to access proactive solutions for healthy, productive hives."

According to the U.S. Department of Agriculture (USDA), honeybees pollinate about one-third of the crops globally and are responsible for producing an estimated \$15 billion worth of crops. Dalan's first-of-its-kind vaccine is a safe, organic, non-GMO, non-chemical prophylactic tool that empowers beekeepers to protect their hives without the use of antibiotics.

Since its development, the vaccine quickly received conditional market authorization for its groundbreaking vaccine in both the United States and Canada, expanding Dalan's ever-widening reach to beekeepers globally
