

Al Dahra and Agreeena announce carbon farming project in Romania

15 December 2023 | News

The 55,000-hectare project will take place on the largest consolidated arable farm in the European Union, operated by Al Dahra-owned Agricost

The 55,000-hectare project will take place on the largest consolidated arable farm in the European Union, operated by Al Dahra-owned Agricost

A partnership between UAE agribusiness, Al Dahra, and Danish climate agtech company, Agreeena, will see the largest consolidated arable farm in the European Union transition to regenerative agriculture. More than 55,000 hectares of arable land on the Al Dahra-owned Agricost farm on Great Braila Island in Romania will enter Agreeena's soil carbon programme.

The two global players signed a Memorandum of Understanding (MoU) at COP28, signifying a pivotal partnership between Al Dahra and Agreeena that will unite their strengths and expertise to collaborate globally.

The agricultural industry is in a unique position to play a critical role in sequestering carbon dioxide (CO₂) from the atmosphere. The agrifood system accounts for approximately one-third of global greenhouse gas (GHG) emissions, but the agricultural industry also provides a significant opportunity to be a part of the climate solution. By incentivising farmers to transition from conventional to regenerative farming practices, Agreeena supports farmers in turning their soils into carbon sinks, removing and storing CO₂ from the atmosphere.
