Strategic partnership for long-term and high-quality cooperation to deploy state-of-the-art next generation of drone technology

Strategic partnership for long-term and high-quality cooperation to deploy state-of-the-art next generation of drone technology

Agri Spray Drones, a leading provider of drone-based spraying solutions for American farmers and custom applicators, announced a new partnership with China's EAVision, a drone manufacturer focused on empowering agricultural communities. EAVision located in China and Silicon Valley, provides advanced tools for the agricultural industry with core technologies in LIDAR vision, AI, and autonomous control for complex outdoor environments with prime focus on precision agricultural technologies.

"Our mission at Agri Spray Drones has always been to bring new opportunities to rural America," said Taylor Moreland, Founder and CEO of Agri Spray Drones. "We're excited to partner with EAVision, a company that shares that sentiment and has deep agricultural roots, to bring their innovative drone solutions to our customers across the US. As a close partner in the US, we look forward to delivering the next generation of drone technology to American farmers and custom applicators."

The agricultural spray drone industry, which contributed over \$80 million to rural economies in 2023, has faced significant challenges in recent market conditions. This partnership represents a strategic response to ensure continued technological innovation and support for American farmers.

The two organizations intend to develop a long-term and high-quality cooperation, with Agri Spray Drones expanding its offerings with EAVision's flagship drone (the J100), while continuing to service and support existing product offerings. The J100 - the only spray drone on the market with built-in lidar technology to navigate diverse terrains - also comes equipped with state-of-the-art mist nozzles that enable fine, even, atomization with precise control over droplet size and spray patterns

across diverse crop types.

"EAVision is committed to deepening our presence in the US agricultural market," said Dr. Wang Xinyu, chairman of EAVision. "With strategic investments from respected agricultural investors like Continental Grain Company and BASF, we're positioning ourselves to not just serve the US market, but to invest in its future. "

Agri Spray Drones is one of the largest and most experienced distributors of agricultural spray drone technology in North America. ASD strives to empower rural America by connecting farmers and service providers with advanced agricultural technology solutions. These solutions bridge operational gaps in modern farming practices, enabling more precise and efficient field operations while creating sustainable business opportunities across rural communities.
