Sign non-binding MOU to explore multiple areas of collaboration across the agricultural supply chain as part of a strategic alliance

Sign non-binding MOU to explore multiple areas of collaboration across the agricultural supply chain as part of a strategic alliance

ADM and Mitsubishi Corporation have signed a non-binding memorandum of understanding to form a strategic alliance and to explore potential areas of future collaboration across the agriculture value chain.

In recent years, the importance of secure and resilient food and agriculture supply chains has come into sharper focus, driven both by short-term dislocations as well as structural demand shifts powered by global population growth, economic development, and increasing consumer preference for sustainably sourced products. It has thus become essential to adopt a comprehensive and cross-industrial approach, connecting multiple businesses in different segments to address these challenges.

Building on their long relationship, ADM and MC now will explore potential new ways to bring their respective strengths together to meet these global challenges.

ADM offers the capabilities of one of the world's largest food and agriculture companies, with MC offering a cross-industrial business platform spanning multiple industries including food and energy. The companies hope that these broad and deep capabilities will allow them to create value by identifying new opportunities to meet global needs ranging from a robust biofuel supply chain to a stronger, more resilient global food system.

Together, ADM and MC are driving solutions that will help shape the future of the global agriculture value chain.
