

Thailand's Commerce Ministry prepares for 2025 Fruit Export Surge

31 March 2025 | News

The campaign seeks to secure higher fruit prices and generate more than 1.15 M for every farmer

The campaign seeks to secure higher fruit prices and generate more than 1.15 M for every farmer

Thailand's Commerce Minister Pichai Naripthaphan convened a meeting to oversee preparations for the 2025 fruit production season, which the government expects to produce more fruit than usual. The session brought together commercial attachés from overseas Thai Trade Offices and provincial commerce officers, in coordination with the ministries of Agriculture, Finance, Transport, and Foreign Affairs, to align efforts across sectors.

A total of 25 operational plans have been introduced by the Ministry of Commerce to support seven strategic measures. These include boosting domestic consumption, expanding access to export markets, improving logistics, and strengthening quality control systems. The campaign seeks to secure higher fruit prices and generate greater income for more than 1.15 million farming households across the country.

The government has identified 2025 as a key year for elevating Thailand's global fruit trade, with Prime Minister Paetongtarn Shinawatra prioritizing support for agricultural communities and farmer livelihoods. Provincial commerce officers and overseas trade representatives have been instructed to work closely with growers and exporters to build resilient market networks and ensure price stability throughout the harvest season.

Minister Pichai has ordered daily situation reports from commerce offices to enable quick responses to emerging issues. Trade officials based at border crossings are closely monitoring traffic flow, regulatory developments, and logistical constraints that could disrupt supply chains.

As harvests begin, the ministry is working to streamline export processes and resolve any transport-related challenges. The coordinated approach is expected to help expand Thailand's agricultural footprint internationally while supporting long-term economic growth in rural areas.
