The Mosaic Company continues to execute its growth strategy with the successful launch of its latest biostimulant, Neptunion, in China. This innovative product enhances crop resilience to abiotic stresses—including drought, salinity, and heat—by incorporating stress-tolerant properties into water-soluble fertilizers

The Mosaic Company continues to execute its growth strategy with the successful launch of its latest biostimulant, Neptunion, in China. This innovative product enhances crop resilience to abiotic stresses—including drought, salinity, and heat—by incorporating stress-tolerant properties into water-soluble fertilizers

The Mosaic Company continues to advance its growth strategy with the successful launch of Neptunion, its newest biostimulant product, in China. This innovative product is designed to help crops overcome abiotic stresses, such as drought, salinity, and heat, by incorporating stress-resistant properties into water-soluble fertilizers. By enhancing the resilience of crops, Neptunion enables farmers to protect their yields in challenging environmental conditions.

Through its Mosaic Biosciences product line, the company is at the forefront of providing sustainable agricultural technologies that allow growers to maximize their productivity while minimizing their environmental footprint. These technologies are critical as the agricultural industry faces increasing challenges related to climate change, resource scarcity, and the growing demand for food.

Jenny Wang, Executive Vice President of Commercial, commented, “The launch of Neptunion in China represents a pivotal step in advancing our Mosaic Biosciences business. This milestone not only demonstrates our ability to bring innovative, high-quality products to market but also underscores our commitment to helping farmers increase agricultural productivity while promoting sustainability. We are focused on expanding our market access and providing biological products that enhance the value we deliver to farmers globally, ultimately supporting the world’s growing food needs.”

In addition to the launch in China, Neptunion is currently undergoing the regulatory registration process in key agricultural markets, including India and Brazil, positioning the product for wider global distribution. As the product moves through these regulatory processes, Mosaic is focused on building partnerships and expanding its footprint in the global agricultural market to address the evolving challenges of modern farming.
