AI backed system analyzes real-time imaging data to reduce operator input, thereby improving efficiency and productivity

AI backed system analyzes real-time imaging data to reduce operator input, thereby improving efficiency and productivity

Esaote, a leading company in the field of medical diagnostic imaging, has introduced new **MyLab®Heron** ultrasound system under its category of high-performance portable ultrasound systems.

MyLab®Heron was inspired by the animal from which it takes its characteristics, such as precision and ease of movement, even in challenging conditions, and is a portable system that delivers superior results. With its simple, intuitive, customizable functions, and cleanable touch interface, this device is ideal for any clinical setting due to its ease of use and mobility.

In order to optimize the veterinarian's ability to care for the animal, workflows are designed to simplify the number of steps and to reduce the number of actions. By combining advanced technology with veterinary solutions, the diagnostic process is made simple and reliable. The result is a faster and more accurate decision-making process. Artificial intelligence features built into the system analyze real-time imaging data to reduce operator input, thereby improving efficiency and productivity.

Similarly, **MyLab®Heron** offers **high-resolution imaging** in both superficial and deep areas, thanks to the **wide range of probes** available. Consequently, it is possible to scan animals of any size in all applications, from general imaging to cardiology, from the musculoskeletal system to reproductive,

with unparalleled clarity. A powerful tool designed to support veterinarians working in clinics, hospitals, and on their own.

MyLab®Heron supplements and enriches the range of Esaote ultrasound scanners **dedicated to veterinary medicine**, of which **MyLab®Fox and MyLab®Panther** are well-established, widely recognized benchmarks in international markets. They demonstrate the attention to innovation and detail with which Esaote intends to make veterinary care increasingly accessible and decisive, to improve proximity to animals and the people who love them.
