The Mosaic Company is progressing its growth strategy with the successful launch of a biostimulant product in China

The Mosaic Company is progressing its strategy to redefine growth by proudly announcing the successful launch of Neptunion, its latest biostimulant product, in China. Neptunion enhances crop resilience against abiotic stresses such as drought, salinity, and heat by integrating stress-resistant properties into water-soluble fertilizers. This addition to the Mosaic Biosciences portfolio supports sustainable agriculture by helping growers boost yields while reducing environmental impact.

Jenny Wang, Executive Vice President Commercial, commented, “The launch of Neptunion in China marks a key milestone for our Mosaic Biosciences business. We are dedicated to expanding market access and driving agricultural productivity through innovative biological solutions that increase value for farmers and contribute to global food security.” Neptunion is also in the registration process for India and Brazil markets.
