

Olmix launches Cormin® SW, a PFC6-certified biostimulant for enhancing blended fertilizer performance

28 June 2025 | News

Fertilizer efficiency: one of the major challenges facing agriculture

Fertilizer efficiency: one of the major challenges facing agriculture

Olmix continues its development strategy by obtaining European PFC 6 certification for Cormin® SW, its non-microbial biostimulant designed for bulk-blending fertilizer manufacturers. The certification is another asset in Olmix's strategy to address the European market for mineral fertilizer blends. It attests not only to the agronomic performance of Cormin® SW, but also to the rigor of quality control and the transparency of information provided to users, in accordance with European Regulation 2019/1009.

Faced with these challenges, Cormin® SW offers farmers a concrete solution. Formulated using exclusive MIP® RHIZO technology based on enzyme cofactors and prebiotics derived from seaweed and organic plant extracts, the product acts directly on the soil microorganisms involved in nutrient assimilation by plants.

“To produce more with less, it is essential to make the most of every kilogram of fertilizer. Cormin® SW improves crop nutrition while mobilizing soil resources, maximizing yields and further rationalizing fertilizer inputs for greater environmental friendliness,” explains Jérôme Alix, Head of Crops at Olmix.

A simple, adaptable, and immediately operational solution:

Presented in the form of granules to be added directly to fertilizer mixing stations, Cormin® SW integrates perfectly into existing production lines. Compatible with all fertilizers, it is used at a dose of 75 kg/ha on all field crops.

“This certification opens the doors to the European market, but also to Asia and Latin America, where the quality of European standards is recognized and interest in our technology is growing. Cormin® SW embodies our vision: high-

performance, eco-designed solutions that drive progress for the agriculture of tomorrow," concludes Charles Marchand.

Olmix is an international group specializing in the development, production and distribution of high value-added bio-based solutions for the livestock and crop sectors. Through its ranges of finished products and ingredients, the Group is a privileged partner of farmers, distributors and agri-supply manufacturers on an international scale, enabling intelligent, sustainable agriculture in over 100 countries worldwide. Its Plant care division offers solutions to improve soil health, optimize plant nutrition and resistance, address climate change and reduce the use of inputs.
