

Livestock Philippines 2026 showcases next-generation technologies to advance food security and sustainable farming

26 June 2026 | News

Government and industry leaders position the country's flagship livestock and aquaculture expo as a catalyst for innovation, capacity building, and stronger public-private collaboration

The Philippines is reinforcing its commitment to modernizing livestock and aquaculture production through Livestock and Aquaculture Philippines 2026, with the Department of Agriculture (DA) positioning the country's flagship industry exhibition as a strategic platform to accelerate technology adoption, strengthen food security, and promote sustainable agricultural growth.

Held from 24 to 26 June at the World Trade Center Metro Manila, the annual exhibition brings together stakeholders across the livestock, poultry, aquaculture, meat processing, and animal feed industries, providing a venue for farmers, agribusinesses, researchers, policymakers, and technology providers to explore emerging innovations and forge new business partnerships.

Now in its ninth year of collaboration with the Department of Agriculture, the event has evolved beyond a conventional trade exhibition into a knowledge-driven platform focused on innovation, skills development, and industry transformation. Organizers highlighted the growing importance of connecting producers with modern production technologies, improved management practices, and market opportunities as the country's agriculture sector navigates increasing pressure to improve productivity while ensuring long-term sustainability.

The exhibition features a broad range of technologies and solutions spanning animal health, biosecurity, livestock genetics, feed innovation, processing, financing, environmental sustainability, and farm mechanization. Alongside commercial exhibits, technical conferences provide stakeholders with insights into emerging industry trends and practical approaches to improving farm efficiency and resilience.

The Department of Agriculture has expanded its institutional presence this year through a dedicated pavilion representing 11 government agencies, enabling farmers and agribusinesses to access technical services, extension support, regulatory guidance, and industry programs under a single platform. For the first time, the Bureau of Plant Industry also joined the

exhibition, showcasing vegetable seeds and planting materials as part of efforts to promote integrated farming systems.

The event also underscores the growing importance of public-private collaboration in strengthening the country's livestock value chain. Industry organizers noted that closer engagement between government agencies, technology providers, researchers, and producers is becoming increasingly critical as the sector responds to evolving consumer demand, animal health challenges, and sustainability expectations.

Beyond technology and business development, the exhibition continues to recognize excellence across the livestock sector through the Livestock Philippines Recognition Program, celebrating farmers and cooperatives whose contributions have advanced the country's livestock and poultry industries.

As the Philippines intensifies efforts to build a more resilient and competitive agricultural sector, Livestock and Aquaculture Philippines 2026 reinforces the role of innovation, knowledge exchange, and strategic partnerships in shaping the future of sustainable food production.
