Acquires Progres<sup>®</sup>, an innovative natural additive which can reduce inflammation and stimulates tissue recovery with a healing effect

AB Vista, developer and global supplier of feed additives for animal nutrition, with exclusive presence in Singapore and India, has extended its product offering with the acquisition of Progres<sup>®</sup>, an innovative natural additive from Finnish biosciences company Hankkija.

Progres is a patented natural resin acids product that improves gut integrity by reducing inflammation and stimulates tissue recovery with a healing effect. It also beneficially modulates intestinal microbiota, favoring butyrate producers and lactobacilli, reducing the growth of Gram-positive pathogens.

A component of antibiotic-free production systems, Progres was introduced in 2015 and improves poultry, swine, and ruminant performance.

AB Vista's Managing Director Juan Ignacio Fernández said: "Progress is a natural product with proven research and scientific foundations that supports a more sustainable approach to animal production. By adding Progres to our portfolio, we can support nutritionists, veterinarians, and production managers in developing strategies and production programmes that deliver improved gut health, nutritional optimisation, and food safety & security. We look forward to leveraging our global supply chain to allow new markets to take advantage of Progres."
