

Green Water Labs introduces Algae Control solutions

28 April 2023 | News

A revolutionary eco-friendly solution to prevent and eliminate unwanted algae growth

A revolutionary eco-friendly solution to prevent and eliminate unwanted algae growth

Green Water Labs, a leading manufacturer of eco-friendly chemicals from organic waste has launched its first product, *Algae Control*. Designed to prevent and eliminate algae growth, *Algae Control* is a revolutionary bio-based solution that is safe to be used around people, pets, and the environment. The product works in a variety of different environments such as: Aquariums, Ponds, Fountains, Roofs/Decks, Boats.

Algae Control is made using a proprietary blend of plant-based compounds that are transformed into a powerful, algae-controlling solution. Unlike traditional algae prevention solutions that bioaccumulate and harm aquatic life, *Algae Control* is safe for fish, plants, and other aquatic organisms. It can also be used on roofs, decks, and walkways without causing damage to structures or the surrounding environment.

The formulation has been carefully developed to biodegrade, offering a safe alternative to current products on the market today. Green Water Labs is committed to reducing the environmental impact of chemical solutions by using organic waste as

the basis for its products.

Green Water Labs is the biochemical arm of Planted Materials Inc, working hard to recycle organic waste into renewable materials and chemicals. By developing scalable processes to convert organic waste into abundant materials, Planted Materials Inc is able to develop and manufacture a wide variety of alternatives to petroleum based materials and chemicals.
